EDUCATION

Bachelor of Technology in Information Technology

Sri Ramakrishna Engineering College

September 2024 - Present

Coimbatore, Tamil Nadu

Higher Secondary Education

Yuvabharathi Public School

June 2022 – April 2024

Coimbatore, Tamil Nadu

INTERNSHIP

Full-Stack Developer

Indian Institute of Technology – Madras

Chennai, TN, India

Full Time | September 2025 – Present

i. Anantam Control Station is a Ground Control Station designed to operate unmanned vehicles including drones, rovers, submarines, controlling swarming.

- Significantly enhanced communication speeds, shifting architecture from http to sockets.
- Developed optimised software to handle large high velocity data in real time.

ii. ZIIP is a Geospatial analytics platform capable of performing 2D aerial imaging to 3D spatial terrain.

- Developed knowledge graphs and preserving timeline updates.
- Deployed and optimised workflow in AWS cloud EC2 hosting.

Full Stack Developer

Nexoris Solutions

Coimbatore, TN, India

Full Time | June 2025 – July 2025

i. eXOR is a product dashboard analytical platform managing and tracking product performance in sales, development, marketing and tools to analyze data in product's scope.

- Developed dashboard view for performance analytics.
- Fixed and optimised efficient data handling in metrics between server and dashboard.

PROJECTS

i. eAttendance – Computer Laboratory Attendance System

September 2025 - Present

- eAttendance is a automatic attendance collector in laboratories providing a computer to individual students.
- Designed to automatically start upon boot and prompts to collect information on current user details.
- Integrated into a central system to manage all systems act as server

ii. EDUDOTE - Classroom Timetable Management System

September 2025 - October 2025

- Edudote is a full-stack academic management platform that automates complex classroom scheduling using AI while providing a centralized hub for managing faculty data and administrative workflows.
- Developed AI powered constraint engine that analyses data of faculties and their individual timetable developed using Ollama and cloud AI models to allocate faculties classes for a week.
- Designed approval and regeneration of timetable with easy editing to allocate and track shifts in classes to accomodate unexpected situations.

- An autonomous plug and play system built on Raspberry Pi to schedule and broadcast custom audio via existing sound systems.
 - Architected a headless deployment model requiring zero configuration, interfacing directly with existing PA infrastructure via an analog AUX output.
 - Deployed a background daemon service to continuously run the system to monitor real-time clock data and trigger audio playback in the PA sound system.
-

SKILLS & TOOLS

Hard Skills:

- **Programming Language:** TypeScript, JavaScript, Python, Java, C, C++.
- **Frontend Stack:** HTML, CSS, Vite, React.js, Next.js, Astro, Zustand, SCSS, Websockets, jQuery, Tailwind CSS.
- **Backend Stack:** Bun, Node.js, Mavlink, Express.js, Hono, Elysia, Puppeteer, Socket.io.
- **Hardware Stack:** Raspberrypi, ESP32, Arduino.
- **Databases:** PostgreSQL, MySQL, SQLite, MongoDB, Supabase, Firebase, Redis.
- **Hosting:** AWS, Vercel, Netlify.
- **Others:** Git, Docker, Linux, Blender, WebODM, Figma, Ollama, LMStudio.

Soft Skills:

Communication, Problem-Solving, Adaptability, Collaboration, Attention to details, Continuous Learning, Cross-Domain Agility.

ADDITIONAL INFORMATION

- **Languages:** English, Tamil, Kannada.
 - **Certifications:** Infosys Figma Training, Power BI for Beginners, Tableau for Beginners., Mobile App Development using Flutter, Networking and Web Technology, Introduction to Digital Marketing, Agile Project Management and Tools for Product Managers, Java Programming for Beginners, Project Managment 101, Programming in C.
-
